PATENT APPLICATION

- 5 entitled: BEARING CAGE, BALL BEARING COMPRISING SUCH A
CAGE AND PROCESS FOR ASSEMBLING SUCH A
BEARING

10

ABSTRACT OF THE DISCLOSURE

- This invention relates to a ball bearing cage which defines recesses for receiving balls in a single row. It is in the form of a ring obtained by casting or machining and intended to be interposed between an inner ring and an outer
- 15 ring of a bearing. The recesses are distributed in two groups, the recesses of the first group each having an opening for positioning a ball located on a first side of the cage, while the recesses of the second group each have an opening for positioning a ball located on a second side of the cage, opposite the first side.
